PNEUMONIA DETECTED

Quantitative Analysis

Metric	Value
Confidence Score	95.0%
Severity Level	Moderate
Total Lung Affected	36.1%
Left/Right Split	16.2% / 19.9%

Left: Original Scan | Right: Infection Heatmap Activity

Radiological Findings

There are bilateral, patchy, ill-defined opacities, particularly prominent in the perihilar and lower lung zones, consistent with alveolar or interstitial infiltrates. These findings represent distinct visual evidence of pathological opacification.
